

Great Vision Is More Than Just A Numerical Prescription

Make your vision solution complete with:

Progressive lenses provide a youthful look, while offering a natural visual experience with a smooth transition between far, intermediate and near vision.

Premium single vision lenses utilize digital processing to offer sharp and clear vision. Eyezen™+ lenses also reduce strain you may experience when viewing digital devices.

Polycarbonate lenses offer superior impact resistance to keep your eyes protected. Polycarbonate lenses are thinner than standard plastic lenses, exceptionally lightweight and offer frontside UVA/UVB protection.

No-Glare treatments on lenses improve vision by reducing reflection and glare, increasing cleanability and increasing scratch resistance.

Blue Light Filtering category lenses* reduce exposure to potentially harmful Blue-Violet light.

*Select Essilor lenses deflect up to 20% of the harmful Blue-Violet light.

Transitions® adaptive lenses adapt to changing light as you move through your day to reduce glare, eye fatigue and eyestrain for more effortless sight, sunrise to sunset.

Photochromic performance and polarization are influenced by temperature, UV exposure, and lens material.

Polarized lenses provide the enhanced contrast and glare reduction you deserve outdoors. This sunglass lens option offers vibrant colors, sharp color detail and frontside UV protection.
