Transitions® Signature™ VII

ADAPTIVE LENSES

FLAT TOP 28

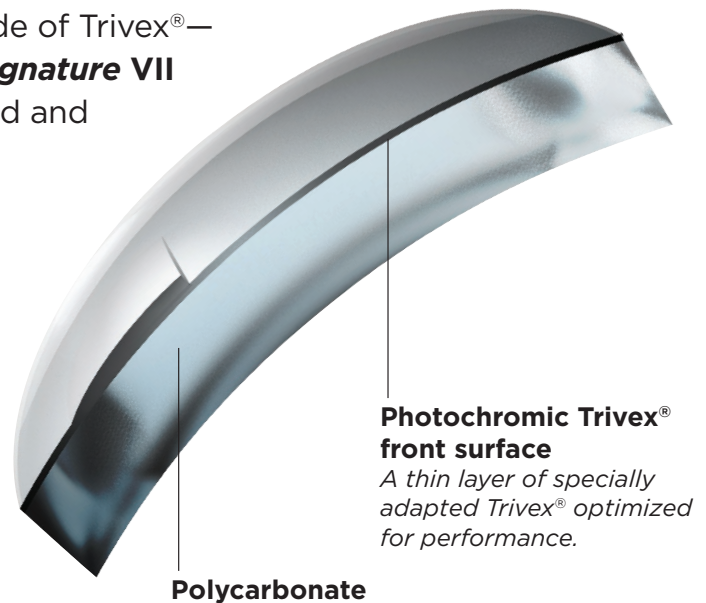

POLYCARBONATE COMPOSITE

Introducing a new lens innovation that the optical industry has been waiting for!

Transitions® Signature™ VII lenses in polycarbonate composite are now available for your bifocal wearers.

Younger Optics and Transitions Optical have developed a polycarbonate composite lens that incorporates a thin photochromic front surface bifocal layer made of Trivex®—resulting in a lens that delivers **Transitions Signature VII** performance that is surfaced, polished, edged and dispensed like a clear **polycarbonate** lens.

- **Transitions Signature VII** performance—fully clear indoors and just the right amount of tint outdoors
- Thinner and lighter 1.59 index
- Excellent impact resistance
